CEDARS-SINAI®

The *16th Annual Emergency Medicine Symposium: A Practical Update* is a cutting-edge course that will provide participants with the latest clinical information to support the delivery of fast and accurate diagnoses and treatment decisions. This one-day symposium will cover current and emerging trends in the emergency department (ED) and will include the management of soft tissue infections in 2018, updated clinical guidelines for the management of the crashing asthmatic, and indications and techniques associated with pacing in the ED.

Expert faculty will present a surprising list of medical therapies that were once considered indisputable and have since been debunked, recommendations on how to manage a challenging patient, and new tools and treatments for severe epistaxis. Join your colleagues on December 7th and share, explore and discuss ways to improve the safe, effective and efficient delivery of healthcare in the ED, with the ultimate goal of improving patient outcomes and increasing patient satisfaction.

- Utilize these work arounds to improve outcomes related to recent national shortages of critical medications
- Describe the benefits and drawbacks of newly approved highly sensitive troponin testing
- Develop and implement a strategy/treatment algorithm for critically ill asthmatic patients based on updated guidelines
- Recognize when to pace and how to technically perform transcutaneous and transvenous pacing in the ED setting
- Improve patient satisfaction using recommended tools for managing patient expectations and managing the challenging patient
