ACTIVITY INFORMATION

COURSE DESCRIPTION

The clinical neurosciences are undergoing rapid advances in diagnosing and treating neurological disorders, particularly those concerning surgical treatment options. This course is designed for neurologists, neurosurgeons, internists, family practitioners, oncologists and allied healthcare professionals to increase awareness of both established and emerging treatment options for brain tumors, Parkinson's' disease, degenerative neurological disorders such as Alzheimer's disease and spinal disorders, as well as endovascular and stroke management.

The program will present the treatment options in an interdisciplinary fashion, using plenary lectures and case presentations. This symposium will offer participants an opportunity to engage in interactive discussions with renowned faculty who are involved with initiating these neurological advances.

EDUCATIONAL OBJECTIVES

- Utilize the latest evidence-based strategies for preventing brain diseases, and counsel patients on making specific lifestyle modifications
- Describe the indications for and the differences between radiotherapy and radiosurgery in treating malignant brain tumors
- Recognize the signs and symptoms of disorders amenable to diagnosis and treatment by neuroendovascular surgical techniques
- Discuss the results of recent clinical trials and emerging treatment strategies for stroke
