ACTIVITY INFORMATION

COURSE DESCRIPTION

The clinical neurosciences are undergoing rapid changes in the diagnosis and treatment of neurological disorders, particularly those concerning surgical treatment options. This course is designed for neurologists, internists, family practitioners, neurosurgeons, pain management and rehabilitation specialists, oncologists and allied healthcare professionals to increase awareness of both established and emerging treatment options for brain tumors, epilepsy, degenerative neurological disorders such as Alzheimer's Disease, spinal disorders, and endovascular and stroke management.

The program will present the treatment options in an interdisciplinary fashion using plenary lectures and case presentations. This symposium will offer participants an opportunity to engage in interactive discussions with renowned faculty who are involved with initiating these neurological advances.

EDUCATIONAL OBJECTIVES

- Discuss the challenges of an aging society and review the latest evidence regarding prevention of brain diseases, and their application to everyday practice
- Identify at least 4 medical conditions that independently may contribute to cognitive decline and evaluate the therapeutic options available
- Describe the mechanisms associated with generation of pain in Trigeminal neuropathy and be aware of therapies that are possible
- Integrate evidence-based best care for the prevention of stroke and the care of adults with acute stroke into everyday clinical practice and develop personalized treatment plans that offer the best patient health outcomes
- Identify new treatment strategies for the endovascular treatment of acute stroke and minimally invasive treatment for cerebral hemorrhage
- Describe new surgical innovations in the management of brain tumors
